

Transparency of Learning Outcomes

#TRUEProjectEU

aims to develop an integrated training strategy for the assimilation of blockchain technology in Higher Education Institutions (HEIs).

The project will produce:

Unlocking the Potential

A basic knowledge pack on the potential of blockchain technology adapted to Higher Education, including a competency framework for the blockchain expert (member of the HEI staff)

Blockchain Mastery

A training programme #MOOC addressed to HEI staff, as well as a serious game that provides an innovative learning experience on using blockchain technology.

Pilot Testing

Now all the partners have completed the platform with the MOOC and the translations for every language. Finally, after this stage, we've had the pilot testing phase which is now almost over!

Get ready because our project is taking more and more shape

Each partner recruited 20 representatives of the target groups. This is because it will be important to incorporate feedback from both the final users and the professionals that might adopt the tool in their teaching activity.

The latest step that has now reached its validation is the IO3 TRUE Serious Game: a game-based situational training activity addressed to HEIs teams designed to encourage them to put in practice and improve their theoretical knowledge about blockchain in a safe learning environment.
